

HALYKOO®

SENSIA Mouth ulcer
soothing gel with
hyaluronic acid

Here's how I can help you!

Mouth ulcers (or to use their scientific name, aphthous stomatitis) are tiny annoying sores that can appear on the inside of the mouth, and on the gums and tongue. When the top layer of skin tissue is gone, nerve endings are exposed, which can hurt and cause a lot of discomfort. Many things can cause them: they're often linked to fatigue, an accidental injury or poor oral hygiene. If mouth ulcers recur frequently, it's best to have them looked at, as there can be underlying causes that require a doctor's attention.

In most cases mouth ulcers don't need to

be treated with drugs, and that's when Halykoo Mouth Ulcer Soothing Gel with hyaluronic acid comes in help. Thanks to the hyaluronic acid high-molecular weight, it creates a protective layer isolating the sore and favors the repairing and regenerating processes.

Before you use me, let me explain what I'm made of...

My formula is a mixture of hyaluronic acid, which has a high molecular weight, and the plant-based ingredient aloe vera.

I can't cure the cause, but when I'm applied to the mouth ulcer (which is, in fact, a break in the skin), I quickly create a thin and imperceptible protective layer over it, soothing it and promoting healing.

And I also taste of yummy vanilla, so applying me inside your child's mouth isn't a problem.

...the best place to store me...

Store me in my packaging along with my instruction leaflet, in a cool, dry cupboard between 8°C and 30°C, away from light, heat and sunlight – and curious children!

...what you should check before using me!

My use-by date, which you'll find printed on my box and the upper edge of my tube, is only valid as long as I've been properly stored in my original packaging. Don't use me if my box is damaged or after the use-by date.

Once I've been opened, use me within 30 days. Before using me, please read this illustrated leaflet carefully and keep it for future reference.

Here's how to get the best out of me!

Apply me directly to the mouth ulcer, without using your fingers – that's why I have a long, ergonomically-designed applicator. Apply 1 or 2 drops of gel to completely cover the sore, and avoid direct contact between it and the applicator so as not to contaminate it. You can apply me between 1 and 4 times per day, depending on need. Encourage your child not to touch the sore with his tongue for a few minutes, to give me time to create the protective layer.

Make sure that your child doesn't eat or drink anything or use other products for at least an hour after application, and put my cap back on after every use.

...lastly, just a few things to be aware of...!

I'm only suitable for children aged 2 years or over. I am intended to be used only inside the mouth and always under your supervision, without exceeding the recommended dose.

I should only be used for 1 child, in order to prevent the risk of cross-contamination. It's better to have more than 1 box in the house and write user's name on each box. Please, be careful that your child doesn't grab my cap – if swallowed, it could cause choking. Avoid contact with eyes. In the event of contact, rinse your child's eye out for a few minutes with warm running water. Before using me in concomitance with other drugs, cosmetics or medical devices, always consult your doctor. Please, do not use me if you know or suspect your child is hypersensitive to any of my components.

Do not use for prolonged periods. I have not been tested for continuous and long-term use. In the event of irritation, hypersensitivity or any side effect, avoid further use and consult your doctor.

I do not contain sugars or anesthetic medication, and extensive research has gone into my formula to reduce the risk of allergic reactions!

If your child's symptoms worsen, do not improve after 5 days or new symptoms occur, please consult your doctor.

COMPOSITION: PURIFIED WATER, PVP, XANTHAN GUM, SODIUM HYALURONATE, ALOE BARBADENSIS LEAF JUICE, CITRIC ACID, POTASSIUM SORBATE, PEG-40 HYDROGENATED CASTOR OIL, FLAVOURING, DISODIUM PHOSPHATE, GLUCONOLACTONE, SODIUM BENZOATE, CALCIUM GLUCONATE.

Date of revision: 03/2016.

Research with babies in mind.

Solutions designed specifically to share the journey with you and your child through each stage of his or her development. Because the best way to help them thrive is to keep it simple, use common sense, and also take a few precautions.

Looking after children isn't just about nursing them. It also means understanding their needs, listening to what's important to their parents, and following the advice of paediatricians, as well as providing solutions that put their well-being and their parents' peace of mind first. It means researching a myriad of ingredients to find the ones that are best-suited to their health needs and to ensure that treatment is a pleasant experience for them. It also means choosing solutions that are specifically designed for each phase of their development. Because seeing smiles on the faces of children, and on those of the people who care for them as they grow, are the best possible reward for Halykoo.

DERMA

Skin is our first point of contact with the world around us. In the first 12-14 months of your child's life, their skin is about half the thickness of yours, so great care needs to be taken to protect it. Halykoo's Derma line is the first range of products designed to care effectively for all the needs of your child's skin. Redness, inflammation, chapping, insect bites, and small injuries can be causes of concern on a daily basis, and Halykoo Derma has the answer to all of them.

AERA

There are a variety of viruses that can cause the common cold. And wind, cold weather or badly-ventilated and overheated rooms can irritate the throat. And as the nose and mouth can't be covered up, they're always vulnerable to external threats. Halykoo's Aera range of products have been specifically created to deal with the effects of respiratory infections, helping to fight off sore throats, coughs, cold and fever.

SENSIA

Drinking from a used glass, rubbing dirty hands in their eyes or putting a leaf from the park in their mouth: these are just a few of the things that children do without giving it a moment's thought. A child's immune system is still developing, so the result can be a mouth or eye infection. Whether it's mouth ulcers, oral thrush or conjunctivitis, Halykoo's Sensia range of specifically designed products has the solution.

NUTRA

School, sports, extra-curricular activities - children have increasingly busy days, and the change of seasons can also mean tiredness and loss of appetite. Children are also susceptible to stomach flu caused by viruses, bacteria and parasites. Halykoo's Nutra food supplements, including probiotic products, can help your child make the most of their energy, and ensure that the intestinal flora in their stomach is restored.

SENSIA Exploring the world around you

Your child is an explorer, a curious little scientist who feels compelled to discover the world. Children want to touch everything, put stones or leaves in their mouths in the park, and if it was up to them, they would be outside playing with other kids come rain or shine. Children learn to experiment through playing, and this is exactly when your child's brain is growing and developing, not in front of the television screen. Not allowing your children to play in this way, and telling them off for trying to do so, is not recommended.

Eyes, ears, nose and throat

These are vulnerable areas for your child. They are never covered up, and are gateways from the outside world into the body for threatening germs and viruses. Drinking from a used glass, putting things in their mouths, rubbing their dirty hands in their eyes and rolling around outside in the leaves on the grass are just a few things that children do without giving it a moment's thought. Our bodies are amazing things, but a child's immune system is still developing, so this kind of behaviour can result in a cold, a cough, irritated eyes, sore throat or inflammation of the insides of the mouth, and earache, which can sometimes turn into ear infections.

Help it along without worrying too much

Most of the time, these ailments start with a small infection, and usually take their own natural course, which can, however, be helped along in order to minimise any discomfort.

Mouth ulcer on the tongue

Take mouth ulcers, for example: small, white or reddened sores that are 3-10 millimetres in diameter that some children can suffer from, which normally disappear on their own from within a week to up to 10 days. That's exactly when gels specifically designed for this ailment can help to alleviate discomfort and encourage the natural healing. Another condition that's less common but still widespread especially among newborns is oral thrush. This is a fungal infection caused by the excessive growth of *Candida Albicans*, which can cause irritation both inside and outside the mouth, and result in oral thrush.

Its rise may be due to the use of antibiotics, which have a tendency to destroy the 'good' bacteria which prevent the *Candida* from growing.

Candida Albicans

In cases like this, one remedy is to use disposable wipes, sanitize your child's dummy by boiling it, and pay more attention to the use of glasses and cutlery at the dinner table. Be careful though! If your child's mouth ulcers are particularly big (wider than 10 millimetres in diameter), and if the oral thrush has spread all around the inside of the mouth, not just in one isolated area, consult your paediatrician, who will be able to prescribe the correct treatment. You should also visit the doctor if mouth ulcers and oral thrush recur after a few weeks, or throughout the year. Although you might get used to treating these conditions, there could be an underlying reason for them, such as an iron or B12 deficiency, and they must be carefully investigated until the cause is known.
