

HALYKOO®

SENSIA Oral thrush wipes

The infection itself isn't painful, but it certainly causes discomfort, particularly at feeding time, and when your baby is sucking on their dummy. Halykoo Oral Thrush Wipes can help you get rid of these patches, thanks to the solution they are soaked in and the way they're woven, helping to give relief to your child.

Before you use me, let me explain what I'm made of...

BIO In your grand-mother's day, she might have cured you of oral thrush by rubbing the affected areas with a cloth soaked in baking soda. I follow the same principle: thanks to the way my fibres are woven and then saturated with my special solution of organic calendula, I'm just what's needed. I can help the healing process by physically removing the cause of infection, while creating an environment that is hostile to the fungus.

...the best place to store me...

Store me between 8°C and 30°C in a cool, dry cupboard, away from light, heat and sunlight, - and keep me away from children. And don't let the most inquisitive ones play with me.

...what you should check before using me!

My use-by date, which you'll find printed on my box and on each sachet, is only valid as long as I have been stored correctly in my original packaging. Don't use me after the use-by date, if my packaging has been damaged or if any sachets have been opened. Wash your hands before and after using me, to avoid transmitting the infection on your hands.

Before using me, please read this illustrated leaflet carefully and keep it for future reference.

Here's how to get the best out of me!

Use me as soon as you've opened each sachet. I will dry out if I'm exposed to air and stop working. Wrap me around your index finger, holding the rest of the material taut on the palm of your hand with your other fingers. Wipe me around the inside of your child's mouth, gently putting more pressure wherever the white patches are. You can use me after every meal, but always make sure to use a fresh one.

Candida Albicans can be passed on from the child's mouth to the mother's breast at feeding time as well as on their dummies, so to avoid transmitting the infection, make sure to carefully wash and disinfect everything that comes into contact with their mouth. If your child is older than 3 or 4 years of age, you can even teach them to use the wipes by themselves - under your supervision, of course.

...lastly, just a few things to be aware of...!

I'm a disposable wipe, so please don't re-use me to avoid the risk of reinfection. I'm intended to be used only inside the mouth. Make sure your child doesn't put me in his mouth and doesn't choke, and avoid contact with eyes. In the event of contact, rinse your child's eye out in running water for a few minutes. Before using me in concomitance with other medications, cosmetics or medical devices, consult your doctor. Don't use me if you know or suspect that your child is hypersensitive to any of my components, and if he is fructose intolerant - in fact sorbitol, one of my ingredients, is metabolized to fructose. Don't use me for prolonged periods. I have not been tested for continuous and long-term use. In the event of irritation, hypersensitivity or any side effect, avoid further use and consult your doctor.

I do not contain parabens or sugars, and extensive research and testing have gone into my formula to reduce the risk of allergic reactions! If your child's symptoms worsen, do not improve after 3 days or new symptoms occur, consult your doctor.

COMPOSITION: FABRIC: 100% POLY-PROPYLENE; SOLUTION: PURIFIED WATER, SORBITOL, GLYCERINE, ALLANTOIN, EXTRACT OF MALVA SYLVESTRIS, EXTRACT OF CALENDULA OFFICINALIS, POTASSIUM SORBATE, SODIUM BENZOATE, GLUCONOLACTONE, CALCIUM GLUCONATE, DISODIUM EDTA, CITRIC ACID.

Date of revision: 03/2016.

Research with babies in mind.

Solutions designed specifically to share the journey with you and your child through each stage of his or her development. Because the best way to help them thrive is to keep it simple, use common sense, and also take a few precautions.

Looking after children isn't just about nursing them. It also means understanding their needs, listening to what's important to their parents, and following the advice of paediatricians, as well as providing solutions that put their well-being and their parents' peace of mind first. It means researching a myriad of ingredients to find the ones that are best-suited to their health needs and to ensure that treatment is a pleasant experience for them. It also means choosing solutions that are specifically designed for each phase of their development. Because seeing smiles on the faces of children, and on those of the people who care for them as they grow, are the best possible reward for Halykoo.

DERMA

Skin is our first point of contact with the world around us. In the first 12-14 months of your child's life, their skin is about half the thickness of yours, so great care needs to be taken to protect it. Halykoo's Derma line is the first range of products designed to care effectively for all the needs of your child's skin. Redness, inflammation, chapping, insect bites, and small injuries can be causes of concern on a daily basis, and Halykoo Derma has the answer to all of them.

AERA

There are a variety of viruses that can cause the common cold. And wind, cold weather or badly-ventilated and over-heated rooms can irritate the throat. And as the nose and mouth can't be covered up, they're always vulnerable to external threats. Halykoo's Aera range of products have been specifically created to deal with the effects of respiratory infections, helping to fight off sore throats, coughs, cold and fever.

SENSIA

Drinking from a used glass, rubbing dirty hands in their eyes or putting a leaf from the park in their mouth: these are just a few of the things that children do without giving it a moment's thought. A child's immune system is still developing, so the result can be a mouth or eye infection. Whether it's mouth ulcers, oral thrush or conjunctivitis, Halykoo's Sensia range of specifically designed products has the solution.

NUTRA

School, sports, extra-curricular activities - children have increasingly busy days, and the change of seasons can also mean tiredness and loss of appetite. Children are also susceptible to stomach flu caused by viruses, bacteria and parasites. Halykoo's Nutra food supplements, including probiotic products, can help your child make the most of their energy, and ensure that the intestinal flora in their stomach is restored.

SENSIA Exploring the world around you

Your child is an explorer, a curious little scientist who feels compelled to discover the world. Children want to touch everything, put stones or leaves in their mouths in the park, and if it was up to them, they would be outside playing with other kids come rain or shine. Children learn to experiment through playing, and this is exactly when your child's brain is growing and developing, not in front of the television screen. Not allowing your children to play in this way, and telling them off for trying to do so, is not recommended.

Eyes, ears, nose and throat

These are vulnerable areas for your child. They are never covered up, and are gateways from the outside world into the body for threatening germs and viruses. Drinking from a used glass, putting things in their mouths, rubbing their dirty hands in their eyes and rolling around outside in the leaves on the grass are just a few things that children do without giving it a moment's thought. Our bodies are amazing things, but a child's immune system is still developing, so this kind of behaviour can result in a cold, a cough, irritated eyes, sore throat or inflammation of the insides of the mouth, and earache, which can sometimes turn into ear infections.

Help it along without worrying too much

Most of the time, these ailments start with a small infection, and usually take their own natural course, which can, however, be helped along in order to minimise any discomfort. Take mouth ulcers, for example: small, white or reddened sores that are 3-10 millimetres in diameter that some children can suffer from, which normally disappear on their own from within a week to 10 days. That's exactly when gels specifically designed for this ailment can help to alleviate discomfort and encourage the natural healing.

Another condition that's less common but still widespread especially among newborns is oral thrush. This is a fungal infection caused by the excessive growth of *Candida Albicans*, which can cause irritation both inside and outside the mouth, and result in oral thrush. Its rise may be due to the use of antibiotics, which have a tendency to destroy the 'good' bacteria which prevent the *Candida* from growing.

In cases like this, one remedy is to use disposable wipes, sanitize your child's dummy by boiling it, and pay more attention to the use of glasses and cutlery at the dinner table. Be careful though! If your child's mouth ulcers are particularly big (wider than 10 millimetres in diameter), and if the oral thrush has spread all around the inside of the mouth, not just in one isolated area, consult your paediatrician, who will be able to prescribe the correct treatment. You should also visit the doctor if mouth ulcers and oral thrush recur after a few weeks, or throughout the year. Although you might get used to treating these conditions, there could be an underlying reason for them, such as an iron or B12 deficiency, and they must be carefully investigated until the cause is known.
